(54) Title: **WALL DEVICE FOR FITTINGS**

(57) Abstract: A wall device for fittings includes: a plurality of horizontal and vertical uprights (2), mutually coupled by at least first adjustable fixing means (10); connection means (20) for joining the fittings. The uprights (2) include at least a first channel section (5) and a second channel section (6), each including, starting from a respective bottom side (50), two respective opposed side parts (51) nearly orthogonal to the bottom side (50); two respective first portions (52), parallel to the bottom side (50). Said sides, parts and portions (50, 51, 52) of the at least first (5) and second (6) channel sections define respective cavity (55) and longitudinal openings (8) for the first fixing means (10) and for the connection means (20). At least a first portion (52) of each first channel section (5) has also a second portion (53) orthogonal to the first portions (52) and facing outwards of the respective cavity (55).
